

Midas # 5270
INGHAM POND

MT. VERNON TWP., KENNEBEC CO., MAINE

INGHAM POND

Mt. Veron Twp., Kennebec County
U.S.G.S. Readfield, Maine

Fishes

Rainbow smelt	Minnows
Smallmouth bass	Golden shiner
Largemouth bass	White sucker
White perch	Hornpout (bullhead)
Yellow perch	Pumpkinseed sunfish
Chain pickerel	Black crappie
Northern pike	American eel

Physical Characteristics

Area - 50 acres

Temperatures:

Maximum depth - 19 feet

Surface - 74⁰F

19 feet - 60⁰F

Principal fisheries: Largemouth bass, white perch, chain pickerel, northern pike, black crappie

Ingham Pond is a shallow, weedy pond, which is undergoing rapid changes caused by decomposition of the abundant organic material. This decomposition uses most of the oxygen in the deeper water and causes a void for aquatic life below 10 feet. Eventually, like other ponds of this type, Ingham Pond will turn into a bog.

Northern pike have recently migrated upstream to Ingham Pond from Long Pond. Although adult pike habitat is very limited it is an ideal pond for reproduction because of the abundant spawning and nursery habitat.

Winter anglers have good success for pike, although the pike are generally small. The early-summer angler has the opportunity for larger pike migrating from Long Pond to Ingham Pond during the spawning run.

There is no direct access to Ingham Pond. A snowmobile trail crosses the inlet stream just above the pond for the winter angler. Access during the summer is from Belgrade Stream.

Surveyed - August, 1964

Revised - 2000
